

# Five functional areas: Intelligent Kitchens Concept

The Intelligent Kitchens concept makes good kitchens better.

Hettich's Intelligent Kitchens concept helps with planning a kitchen that's user-friendly, efficient and enjoyable to work in. There are three important points to bear in mind when planning a kitchen:

- Keep the distances short
- Get the ergonomics right
- Take advantage of today's brilliant internal fittings

Working with the five functional areas, the planning concept helps to produce a layout that keeps distances short and workflows smooth. It also identifies intelligent storage solutions for each area. Hettich's functional fittings are key elements in an intelligent, user-friendly kitchen. They help to ensure good ergonomics, efficient storage and easy access.
